SATURDAY*

May 21, 2022

1:30 pm (*FHL Open House*)

Friday Harbor Laboratories

Commons

620 University Road

In 2009, thousands of Surf Scoters washed ashore along the outer coast of WA. In 2014, tens of thousands of Cassin's Auklets littered beaches from Haida Gwaii in British Columbia south to Newport, Oregon. In 2015, hundreds of thousands of Common Murres were found from CA north to the Gulf of AK. And in 2016, thousands of Rhinoceros Auklets died in the Salish Sea. Is this normal? Join Dr. Julia Parrish to learn more about seabird patterns and COASST - the largest beached bird monitoring program in the world.

Feeling inspired? Join us this weekend for a beached bird training session! More information: coasst.org

Julia K. Parrish is a Lowell A. and Frankie L. Wakefield Professor of Ocean Fishery Sciences, and the Associate Dean of the College of the Environment at the University of Washington. She is also the Executive Director of the Coastal Observation and Seabird Survey Team (COASST). Julia has been honored as a NOAA Year of the Oceans Environmental Hero, and has received a Champions of Change award at the White House for her leadership in coastal citizen science.
