Join the Coastal Observation and Seabird Survey Team (COASST) and help make a difference for the environment!

COASST participants collect data on beach-cast marine birds and large marine debris on a monthly basis to establish the baseline pattern of deposition on North Pacific beaches. This training will cover both survey protocols. Data collected helps address important marine conservation issues and protect marine resources. Beach surveys are best conducted in groups of 2 or more—please come with a survey partner in mind or plan to join a team during training.
